

Improve user satisfaction  
and reduce configuration costs  
on your Identity Governance  
platform with EasyRequest™

## Benefits

- Dramatically improve user satisfaction and reduce compliance risks streamlining the Access-Request User Experience
- Reduce setup and ongoing configuration costs on IGA policies such as workflows, scopes, and visibility
- Protect your investment through native integration with your IGA platform
- Decouple User Experience from your IGA platform, setting the foundation for your future Identity architecture

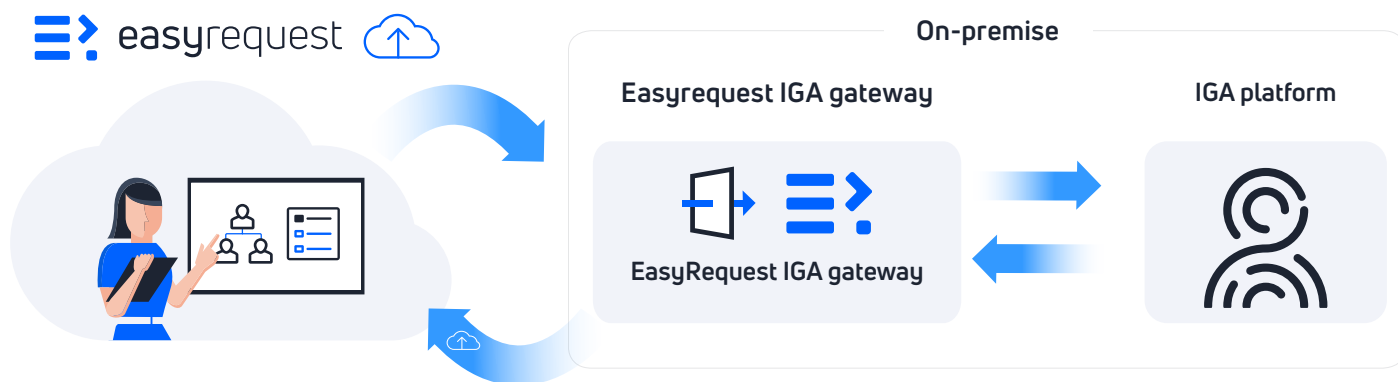

## Are your employees lost in translation when trying to request access using your current Identity Governance platform?

Access request business readability should be a vital capability of any modern "Identity Governance and Administration" (IGA) platform. But, unfortunately, it's not.

Even today, most of the leading IGA products lack business friendliness and readability, generating employee dissatisfaction and high ongoing configuration costs for managing the access catalog and associated policies such as workflows and visibility rules.

"EasyRequest" from Net Studio is a UI As-a-Service application that integrates and enriches your existing IGA platform.

It provides a business- practical access request experience and helps to dramatically reduce the cost of setup and ongoing maintenance of the entitlement catalog, workflows, and visibility rules.

# EasyRequest key capabilities

«Our employees' satisfaction has dramatically improved thanks to EasyRequest front-ending our Sailpoint IdentityIQ platform. Now our employees can easily search, select, and quickly submit for approval the right entitlements for getting their business done without engaging with our help desk personnel.»

CISO, a large payment service provider

«We were advised to implement our access request processes leveraging the ServiceNow platform. It turned out not to be the right decision. When we realized how quickly EasyRequest could integrate with our environment and make our users happy, we quickly decided to implement it as our standard access-request entry point.»

CISO, European Energy and Utility company

## IDENTITY MANAGEMENT THE BUSINESS CAN UNDERSTAND

EasyRequest is the product culmination of years of Identity Management projects and endless debates with business users on how they, not IT folks, would envision an 'easy to use' Access Request application. EasyRequest offers a "rich while simple" user experience on the entire set of Identity data and actions that are kept stored on your existing Identity Governance platform.

## INTEGRATION WITH EXISTING IGA PLATFORMS

Security and privacy requirements are fulfilled by EasyRequest IGA gateway, a low footprint stateless software component that is installed behind the client's firewall and bi-directionally syncs data securely between the client's IGA Datastore and EasyRequest. It can be configured for any Identity Management/Governance platform. Native integrations are today available for Sailpoint IdentityIQ and Micro Focus Identity Manager. Additional leading IGA platforms are on the roadmap.

## EXTENDABLE CATALOGUE

EasyRequest extends the existing, hard to understand, catalog, adding business-rich information such as additional level of taxonomies and searchable metadata. Leveraging its set of out-of-the-box templates, EasyRequest can enrich the current Catalog with a functional view on entitlement, rather than just relying on short descriptions.

## APPROVAL PROCESSES DEFINED IN NATURAL LANGUAGE

In most IGA platforms, workflow and visibility configuration require software coding. EasyRequest puts an end to it, enabling natural language descriptions of approval processes, significantly reducing a substantial effort and allowing an unprecedented audit posture.

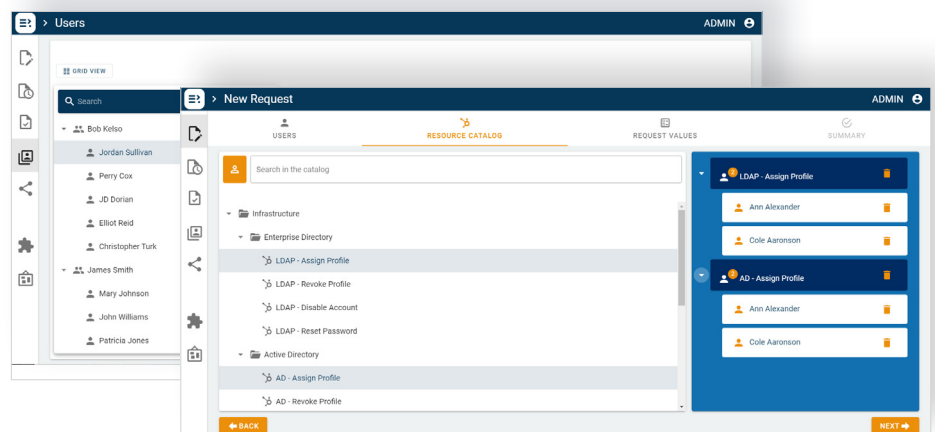

## APPLICATION OWNERS ARE IN FULL CONTROL

EasyRequest offers to Application Owners a set of super-powers to properly govern access to their applications, such as managing the visibility and grouping of "their" portion of the catalogue, to add/remove/block access to users on the managed applications.

## Technical requirements

EasyRequest is available in the following options:

- As a docker container, installable either on-premise or in your cloud provider of choice
- As a Software Appliance
- As a fully hosted SaaS application.

EasyRequest enables users to perform their access request needs using their business language, not someone else's technical jargon

«As a global, fast-growing Business School, the ability to get things done quickly is a vital feature of our DNA. Now, even what looks like a very technical aspect, such as requesting access to digital resources and applications, is a key factor in gaining and retaining students and alumni in our competitive landscape. We were initially skeptical about adding EasyRequest to our Sailpoint installation. It took just a demo to convince the other stakeholders and me this was the right move, not only for improving today's user experience on access-request processes, but also for achieving better agility for any future required platform change».

CIO, Global Business School

## Technical Requirements

- Sailpoint IdentityIQ version 7 and above
- EasyRequest IGA gateway for Sailpoint is a java-based service.
- Java engine version 8 and above is required.

**EasyRequest fully integrates with Sailpoint's IdentityIQ.** It accesses data that is stored on Sailpoint's Identity Cube (Identities, Accounts, Roles, Entitlements, Assignments, Risk Index, and Workflows), exploiting Sailpoint's IdentityIQ APIs and PlugIn Framework.

**EasyRequest IGA gateway ships with several out-of-the-box workflows** that install and execute on Sailpoint's IdentityIQ Workflow Engine. Examples are: Create a New Account; Update Account Properties; Enable/Disable Account; Assign/Revoke Profiles and Entitlements.

**New Sailpoint workflows** can be implemented way more efficiently in EasyRequest, also leveraging the natural language workflow description capabilities that altogether remove the need for coding required on the Sailpoint platform.

**EasyRequest & Sailpoint IdentityIQ data and request status are kept aligned** through the "EasyRequest IGA Gateway for Sailpoint" component. The gateway can be configured to select which Identity attributes should be synchronized with EasyRequest and with which frequency (daily, hourly...).

"We almost lost any hope to be able to replace our in-house developed access-request tool. At PoC level, everything went fine, but then the devil is in the detail, and we could not migrate our access logic and catalog complexity into any standard product. Then, we challenged EasyRequest's capabilities, and they were able to demonstrate the ability to migrate on-par, as well as adding some exciting features such as a compliant version of the 'like Mike' functionality, where such a request gets filtered out and submitted according to our compliance policies."

CIO, Global Pharma

---

## Technical Requirements

- Micro Focus Identity Manager version 4.02 Advanced Edition and above
- EasyRequest IGA gateway for Sailpoint is a java-based service.
- Java engine version 8 and above is required.

**EasyRequest integrates natively with Micro Focus Identity Manager.** It accesses data that is stored on the Micro Focus Identity Vault (such as Identities, Resources, Assignments, and Workflows), leveraging the native soap integration capabilities offered by the Micro Focus User Application Webservices.

**EasyRequest IGA gateway for Micro Focus ships with the following out-of-the-box workflows** that install and execute on Micro Focus Identity Manager workflow engine: Create a New Identity; Update Identity Properties; Enable/Disable Identity; Assign/Revoke Resources.

**EasyRequest overcomes fundamental audit-related Micro Focus product limitations**, providing full approver traceability for completed workflows and retaining "older than 12 months" workflows. EasyRequest also extends any Micro Focus workflow with the possibility to add attachments and in-line message exchange with 'out of the workflow' stakeholders, which would otherwise require off-line email exchange.

**EasyRequest & Micro Focus Identity Vault data and request status are kept aligned** through the "EasyRequest IGA Gateway for Micro Focus" component. The gateway can be configured to select which Identity attributes should be synchronized with EasyRequest and with which frequency (daily, hourly, ...).

# About NET STUDIO

## NET STUDIO S.P.A.

Corporate Headquarters  
Viale Montegrappa 278/E  
59100 Prato (Italy)
